Production Change Request

Fictional training evidence - CR-2026-047

Change ID	CR-2026-047
Title	CustomerDB SQL Server Production Upgrade
Change Type	Planned / Normal
Environment	Production
Scheduled Window	Saturday, 10:00 PM-10:30 PM ET
Change Owner	Database Engineering Team

Business Justification

CustomerDB requires an upgrade to the approved SQL Server release to maintain platform support, improve security posture, and standardize the production database environment.

Scope

The change will upgrade the CustomerDB production database instance. No application code changes are included.

Affected Service

Customer Portal

Expected Business Impact

Customer Portal may be unavailable during the maintenance window. Maximum anticipated service interruption is 30 minutes.

Dependencies

No material downstream dependencies have been identified.

Implementation Summary

- Confirm database backup completion.
- Stop application connectivity.
- Perform database upgrade.
- Restart database services.
- Restore application connectivity.
- Perform technical validation.
- Request business validation.

Validation

Database Engineering will confirm database availability and connectivity. The business owner will validate successful Customer Portal transactions.

Rollback

If critical issues are identified following implementation, the Database Engineering Team will execute the documented rollback plan.

Approvals Required

- Application Owner
- Database Engineering
- Infrastructure Operations
- Change Advisory Board
