Business & Technical Validation Plan

Fictional training evidence - CR-2026-047

Change ID	CR-2026-047
Technical Validator	Database Engineering
Business Validator	Business owner
Validation Window	Immediately after implementation

Technical Validation

- Confirm CustomerDB service is online.
- Confirm database accepts an administrative connection.
- Review database error log for critical upgrade errors.
- Confirm Customer Portal can establish a database connection.

Business Validation

- Open Customer Portal.
- Submit one standard customer transaction.
- Confirm the transaction appears in CustomerDB.

Success Criteria

Change is technically successful when CustomerDB is online and the Customer Portal can complete a standard transaction.

Ownership & Escalation

The business owner will perform business validation. A named individual and backup validator have not yet been recorded in this plan.

Additional Validation

No explicit validation step is currently documented for Customer Reporting Service, Notification Service, or Customer API connection-pool recycling.
